Digital Solution:

**Cut Rite Nesting**  
**MDF Door Library**

***Streamlined Designs and nesting with a tried-and-true solution.***

Business growth, production optimization and streamlined efficiency with Cut Rite Nesting and MDF Door Library

**Since the early 1970's JB Cutting has been a growing family-owned component manufacturer that takes pride in their story, approach, team, machines and partners.**

JB Cutting is a component manufacturer specializing in membrane pressing of custom doors/drawers and components as well as 5-piece doors. At nearly 50 employees, JB Cutting markets to home organization, health care, multi-family housing and office furniture industries.

Before implementing **Cut Rite Nesting** and **MDF Door Library**, JB Cutting was using Building Blocks. It was a very manual operation, left tremendous room for error and didn't allow for tracking of pieces through their saw and CNC.

JB Cutting decided they needed to automate their process and eliminate the numerous entries of the same part.

"We were stuck and could not grow our business. The process we were using tied up our saw and pod & rail machine so that we could not work on other parts of our business (cabinet components). It also created many remakes because of the manual process of hand entering into the CNC." – Debbie Behring

**Enter: Stiles Machinery.**

Stiles worked with JB Cutting to determine that Cut Rite Nesting and MDF Door Library would be the solutions they needed to *grow their business, optimize production and streamline efficiency.*

**STILES | HC**  
A HOMAG COMPANY

“If you are machining and producing custom sizes and styles, Cut Rite Nesting and MDF Door Library are a must. There is so much flexibility and the possibility of integration with many different systems and machines is extensive.”

When working with Cut Rite Nesting and MDF Door Library, everything is preset. If you want to produce an arch or cathedral, it's there. If you want a two or three panel, shaker or slab, all the code is preset and available. **The days of manually programming are over.**

JB Cutting expresses, “Cut Rite Nesting and MDF Door Library has streamlined our process dramatically. We enter *once* into our custom order entry system and the rest are mouse clicks, moving into Cut Rite, optimizing and then another click sending the files to a machine.

Everything is done behind the scenes and is triggered by a part code that we've developed and corresponds to answer tables in Cut Rite. **It really couldn't be any easier for my staff.”**

**“It really is a one stop software solution that runs multiple applications.”**
